RECENT CANADIAN GLACIER REFERENCES 1986-1988

NHRI Contribution No.89001

February, 1989

ABSTRACT

As Executive Secretary of the NRCC Subcommittee on Glacier, C.S.L. Ommanney is responsible for disseminating information on Canadian glaciers. This report summarises references to work done in Canada, on Canadian glaciers and by Canadian glaciologists published between 1986 and 1988. It includes unpublished reports and newspaper articles. The scientific articles reflect the activity of university, government and private sector scientists in different parts of the country. It is worth noting the number of non-Canadian articles using data from the National Hydrology Research Institute's glacier mass balance programmes. Records from Peyto, Sentinel and Place Glaciers are now one of the longer time series available and becoming increasingly valuable in relation to assessments of global climate change.

There are numerous references to the Hubbard Glacier because its advance dammed a fiord and received a lot of public attention. This glacier rises in Canada. Several of the articles in the popular press deal with the commercial exploitation of glaciers for ice cubes, bottled water and water for export.

As this is only a preliminary listing, readers are asked to advise the compiler of any errors or omissions.
